5-inch Central Controller Operation & Installation Manual

RWV09

CONTENT	
Function introduction of central controller	1
Part info for central controller	3
Function operation	8
Wiring diagram and Installation	50

- Please read this operation manual before using the central controller.
- Please keep this manual carefully and safely.
- The illustration is for reference only, and the word description shall prevail.

Main interface display

Picture 1

This central controller can control VR and Heat Recovery Vent (HRV). A maximum of 64 indoor units of any combination can be controlled to a single central controller. The RWV09 can automatically recognize the model as a VRF or single split/multi split, no need to manually set up.

① When connected to a VRF system, each outdoor requires a ADV05 gateway (VRF 5 outdoor unit can directly connect with this central controller).

Function introduction of central controller

③ For VRF, three kinds of controlling mode: Last in first out, Central & Lock can be selected for indoor units.

Last in first out: the indoor unit will execute the last order send by central controller, wired controller or remote controller. For example, if firstly sending low fan speed order by central controller and then sending high speed fan order by wired controller, the indoor unit will execute high fan speed.

Central: central controller enjoys all functions while wired &remote controller can only control ON/OFF of indoor units.

Lock: central controller enjoys all functions while wired & remote controller cannot control indoor units.

- ④ Receiving outer signal input: when receiving outer fire alarm signal, central controller will turn all indoor units off. Note: if no outer signal input, should short circuit the ALARM1 and ALARM2.
- (5) Weekly timer setting. Weekly timer for one or some or all units can be set and can run in cycle, or set Except Date and ONCE. the "except date" can be set under "WEEK" of the schedule , and the "once date" can be set at the "ONCE" of the schedule.
- ⑥ ECO (sets maximum and minimum allowable temperature set points) Cool Only/ Heat Only and DST can be set based on actual requirement.

Restart button: _____

Hold Restart button for 10s to restart central controller Note: If the controller can not turn on automatically after powering on, which indicates the controller is the old version. Hold the restart button for 3s to turn on.

Press to reboot the central controller.

Part info for central controller

Power (12V, GND): 12V DC, please pay attention to +-of power.

Fire alarm linkage contact (ALARM1, ALARM2): AC works normally when closed and all AC turned off when open circuit. If no fire alarm linkage needed, should short circuit the ALARM1 and ALARM2.

Third party interface (B1, A1): A1 should be connected to 485+ while B1 485-.

Communication port (B2, A2): It is used for connecting converter, please pay attention to +-. A2 should be connected to 485+ while B2 485-.

System structure chart when controlling VRF:

When applying central controller, it is required to set address by dip switch for easy checking and maintenance

For every system of AC, address starts from No. 1 to last indoor unit of the system. If totally 20 indoor units are connected in one system, address should be 1-20, if 50 in one system, address should be 1-50, the biggest address is 64.

Note: every indoor address starts from 1.

If one indoor unit is connected to converter (ADV05) addressed as

No. 1, and its central address is No. 6, the indoor code displayed on central controller is AIRCON-1_6, if one indoor unit is connected to converter (ADV05) addressed as No. 5, and its central address is No. 20, the indoor code displayed on central controller is AIRCON-5_20.

Note: when controlling VRF, the RWV09 can control maximum 32 ADV05 and maximum 64 indoor units.

Initialization

After powering on. controller starts to search for indoor units shown as picture 2 below:

Picture 2

Home Page

When search is completed, the home page will show as below, the left side shows the Qty. of indoor units connected and the Qty. of units in condition as On/Off/Error/Offline. PS: Picture 3 is the example.

Indoor units parameter and control

To see the setting for each indoor unit, tap on Air Conditioning. Shown (Picture 4) are the icons indicate the On/Off, Mode, Set Temp, Ambient Temp, Fan Speed and Control Mode of the connected indoor units

Deep Blue is Auto Mode	Light Blue is Cooling Mode
Orange is Heating Mode	Purple is Dehumidify Mode
Green is Fan Mode	Gray is Indoor unit off

If there's any indoor fault, ERROR icon will show on the controller.

Enter the following interface, the icon type shows ON/OFF, mode, setting temperature, ambient temperature, wind speed and control mode. The AUTO mode is deep blue, light blue is cooling, heating is orange, dehumidification is purple, the air supply is green, and the gray is shutdown. If there is a failure, the fault icon is displayed.

Current indoor unit quantity. Default is all the existing indoor units, you can slide up and down to view. You can click on the second icon Q below to select the indoor units you want to view.

Time, you can adjust the time through "Home-Setting-Time"

Air condition name, AC-1_2 represents the gateway (ADV05) addressed as NO.1, and its central address is NO.2

Picture 5

If the indoor unit is VRF, the machine number is AIRCON-1_2, which stands for converter board address is 1, and the centralized address is 2.

If the indoor unit is HRV, HRV1-29_1, representing HRV1, the interface board address is 29 and the centralized address is 1.

Tap on the LIST icon, in the middle of the bottom, to display indoor unit state of the system in list form.

Picture 10

After click "Confirm", the following control interface is entered :

AC 3			2018	.07.27 FRI	10:10
₹ 86∓ +	Auto	Cool	-Ò́,- Heat	Dry	Fan
60°	Auto	Cow .	I Medium	High	
 ⊈ 60 F	Last in first out	Central	T Lock		ON
ft •					

Picture 11

Last in first out:

the indoor unit will execute the last order send by central controller, wired controller or remote controller. For example, if firstly sending low fan speed order by central controller and then sending high fan speed orderby wired controller, the indoor unit will execute high fan speed. **Central:**

central controller enjoys all functions while wired &remote controller can only control ON/ OFF of indoor units.

Lock:

central controller enjoys all functions while wired & remote controller cannot control indoor units.

The parameters can be adjusted according to the needs.

Click on the second icon **Q** in the bottom row, and you can select the indoor units that need to be screened, as shown below.

You can tap to select or cancel the indoor units that need to be displayed, in which blue is selected and white is not selected.

After selecting, click "Confirm", and as in Picture 13, the top left corner shows the number of indoor units displayed by the selected so that the user can choose the indoor unit state that needs to be displayed according to the needs.

Picture 14

Help

Tap "Help" to enter the "help" interface, slide left and right, or and tap the blue icon to show the basic functionality of the product, the lower right corner shows the product model and the program version number.

The controller can control up to 64 units.

The central controller can monitor and control HRV, up to 4 units.

Picture 17

The controller can On/Off the indoor units and check the fault code of the indoor units.

The central controller can add, delete and change the weekly timing control for individual units, groups of units and all units. At most 64 pieces shedules can be set.

Picture 19

The user can set up and close the daylight saving time according to the needs. After the daylight saving time is opened, dates for start and end of DST can be set.

Picture 20

The controller can display the detailed information parameters of the indoor units.

Picture 21

You can set the name of the indoor unit, you can view the fault code.

Schedule

At most 64 schedules can be set. Tap on "Schedule" in the home interface. If schedule has been set, the set of schedule information is displayed. If you enter schedule for the first time, it will be blank like below.

Picture 22

Tap the "+" at the lower right corner to add a new schedule. Next, select the indoor units. Blue represents the indoor units are selected. Tap "All" for the whole system or select the group.

20

After desired units or groups are selected, tap "Confirm" and enter interface as follows. You can set schedule on (start) and off (end) times, mode, temperature, control mode, Once, Cycle and Except. Tap "Edit", to return to the indoor units selection interface.

Schedule_AC				2018.0	7.27 FRI	10:22
Zone	Group*1	AC*4				Edit
		\wedge	^		\wedge	^
Timing	ON	08	00	OFF	17 :	00
		\sim	\sim		\sim	\sim
Temp.	<	76	D°F	>		
A	•					Confirm

Picture 24

Tap "Confirm", the display interface is as follows .

Picture 25

Repeat steps to add another schedule.

Picture 26

To delete a schedule, firstly, tap the icon '-' in the Picture 26,then small circle will appear like Picture 27,secondly, select the schedules to be deleted.

Finally, press the icon 'delete' in the lower right corner

Picture 27

Picture 28

To make a schedule idle, tap on the "Unavailable" icon, see Picture 26. Tap the icon of the desired schedule(s) to idle. After tapping "Confirm", it shows the schedule as "UNAVAILABLE" as seen in Picture 28.

To reactivate a schedule that is idle then tap "Available" as seen at the bottom right of Picture 28. Tap the icon of the desired schedule(s) to reactivate. Then tap "Confirm" as seen at the bottom right of Picture 29.

Picture 30

You can set the exception time for the schedule, click "Edit" on the bottom of the week to add and modify the "Except Date".

Picture 31

Except Date									
	SUN	MON	TUE	WEN	THU	FRI	SAT		
2018/05	01	02	03	04	05	06	07		
2018/06	08	09	10	11	12	13	14		
2018/07	15	16	17	18	19	20	21		
2018/09	22	23	24	25	26	27	28		
	29	30	31						
Cancel							Confirm		

Picture 32

You can choose the date to add the "Except Date". The "Except Date"represents the date when the corresponding schedule do not execute. The "Except Date" is set in the 6 months prior to the current date and within the time range of the current 2 years.

Setting

Tap "Setting" on the interface of Picture 3 to enter the setting interface, shown in Picture 33.

Setting				2018.07.27 FR	I 10:25
General	Time	Name	Zone	Eco	Service
A	•				

Picture 33

1. General

Slide up and down to the view all control settings.

If you click "Confirm" to reinitialize, the controller start to search indoor units, if you click "Cancel", then exit POP.

HRV

If the system is connected with HRV, the main interface is displayed as follows

Tap "HRV", to enter the HRV display list interface

45

Click on the control interface of the HRV units,

Picture 74

Tap on the lower right-hand menu icon to turn all HRV units on or off.

Picture 75

Tap on the next line of magnifying glass Q to select the HRV unit that you need to view

Picture 76

Tap "LIST" to view the HRV in the list form. If the HRV is installed, the naming can be set at the Setting-Name interface

All HRV * 16			2018.07.2	7 FRI 10	:44
Room	Mode	Fan	Link to	Schedule	Error
HRV1-21_1	Recovery	Low	Disabled	No	/
HRV1-21_2	Recovery	Low	Disabled	No	1
HRV1-21_3	By-pass	Low	Disabled	No	2
HRV1-21_4	Recovery	Low	Disabled	No	1
HRV1-22_1	Recovery	Low	Disabled	No	1
A	Q	ICON LIST	Т		≡

Picture 77

If there is a HRV unit, then AC and HRV can be set separately in schedule, and AC and HRV can be set separately in the middle part of the bottom row.

Picture 78

If HRV existence, there is a "Linkage" interface on the "Setting" interface, which allows HRV to interact with ordinary indoor units, as follows

Picture 79

Setting_Lin	kage	2018.07.27 FRI 10:45	
Linkage	HRV1-21_1	O Link to	None Edit
	HRV1-21_2	🛛 Link to	None Edit
	HRV1-21_3	O Link to	None Edit
	HRV1-21_4	O Link to	None Edit
	HRV1-22_1	O Link to	None Edit
	HRV1-22_2	O Link to	None Edit
A	•		

Tap "Linkage" to select which HRV unit to link then tap "Edit".

Picture 80

Select any of the indoor unit to link to the HRV unit. Blue indicates selected. Then tap "Confirm".

All	Select Air conditioning				
No Group					Edit
AC-1_1	AC-1_2	AC-1_3	AC-1_4	AC-2_1	Edit
AC-2_2	AC-2_3	AC-2_4	AC-3_1	AC-3_2	Edit
AC-3_3	AC-3_4	AC-4_1	AC-4_2	AC-4_3	Edit
AC-4_4	AC-5_1	AC-5_2	AC-5_3	AC-5_4	Edit
AC-6_1	AC-6_2	AC-6_3	AC-6_4	AC-7_1	Edit
				Confirm	

Picture 81

After the linkage, the selected linkage of the indoor units, all closed, the linkage of the HRV off, in the linkage process, the HRV machine can also be manual switch, the implementation of the priority principle, with the last operation as the criterion.

RWV09 can connect with VRF system and HRV simultaneously.

Wiring diagram between central controller and converter gateway ADV05.

All of the communication 485 cables between each module and terminal module to the central controller are double core shielded twisted-pair cable. Specific wiring as the table below:

The length of signal line	Wiring dimension
≤100	0.3 mm ² ×2
100 <x≤200< td=""><td>0.5mm²×2</td></x≤200<>	0.5mm ² ×2
200 <x≤300< td=""><td>0.75mm²×2</td></x≤300<>	0.75mm ² ×2
300 <x≤400< td=""><td>1.25mm²×2</td></x≤400<>	1.25mm ² ×2
400 <x≤500< td=""><td>2mm²×2</td></x≤500<>	2mm ² ×2

Installation condition

Don't install near devices that produce electrical interference such as AC motor, radio transmitters like network routers and consumer electronics.

Other electrical noise producers could include computers, auto-door openers, elevators, or other equipment what can produce noise.

Don't install in wet locations.

It will cause failure if you install in a place that shakes violently.

Don't install in the place where it is exposed to direct sunlight or near to the heat. This will cause failure.

Mounting Control

First, attach the mounting plate to the wall. Using a job box is preferred. Use A and B holes for an 86mm box, use C and D holes for a 120mm box. Please take note of the UP indicator.

Place the board, AB for 86 cassettes, CD for 120 cassettes. The hanger should be fixed as the picture, please note the UP direction.

The hanging plate is placed in the direction of the illustration, where A/B is the location of the 86 cassette screws, and the C/D is the position of the 120 cassette screws.

The pendant is fixed to the hole of the pendant, please pay attention to the UP direction.

Wiring between power adapter and central controller.

Central Controller Dimension:

Fix the screw through the bracket on the 86 cassettes and connect the connection. The adapter's AC IN connects to the L and N of 220V, the V+ (RED) collector of the AC OUT, and the AC OUT. Please pay attention to the line order. Then the central controller is fixed down. Notes:

1. B1A1 is a third party interface, paying attention to the line order.

2. B2A2 for 485 interface, access to ADV05 485 B and A, pay attention to line order.

3. ALARM1 and ALARM2 factory default is connected, if not be connected, then the main interface of the central controller will display alarm information, and all indoor units will be turned off.

4. Third party interface

Through the A1B1 interface, it can access third party devices, and can realize the monitoring and control of third party devices to the central controller.

Third party Modbus Communication parameter: Baud rate: 9600 data bits: 8 Check bit: None Stop bit: 1 One frame command finished, using CRC to check
