TRADE

Airwell makes every effort to make life easier for its customers.

From the selection of the solution to the maintenance, through training, Airwell accompanies you in all stages of your air conditioning and heating project.

AIRWELL QUALITY

Airwell products are known for their reliability and longevity. Excellent quality and a particularly large range of products offer customers a clear advantage.

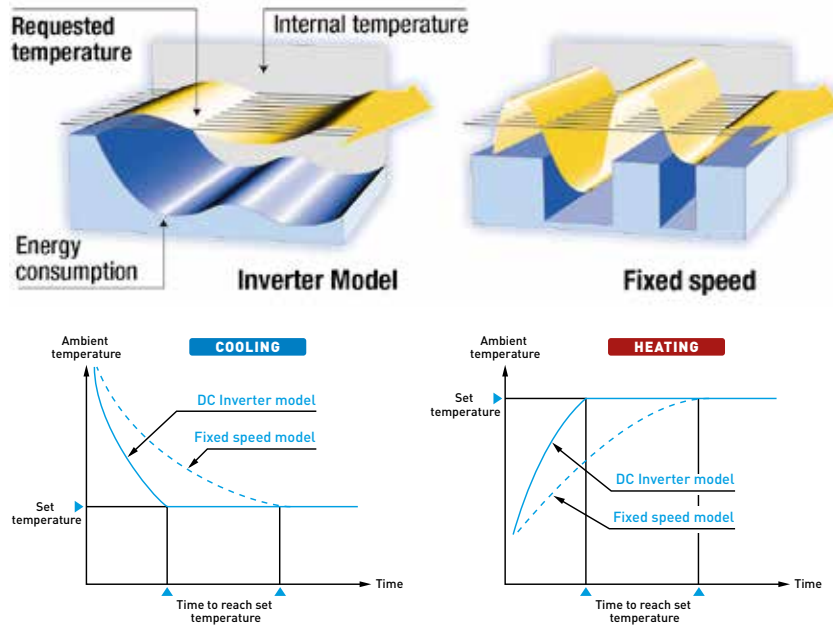

With a global presence, Airwell strives to apply its quality standards to all of its production sites. Respect for the environment plays a key role in our companies.

For Airwell, acting in a way that respects the environment is at the heart of company policy. This means developing systems that promote energy savings, manufactured wholly from recyclable materials, and ensuring natural resources are used responsibly.

Airwell's management evaluates its compliance with these requirements in annual reports and defines new objectives to ensure that tomorrow's environmental challenges are being met today.

DC INVERTER TECHNOLOGY

The protection of our environment is one of the most important tasks we have. Speaking about air conditioning, Inverter techniques became an important technology for this essential task. Inverter not only save energy but also provides an excellent sound performance and a high flexibility.

HEATING MODE OPERATION DOWN TO -15°C

The latest DC Inverter technology, combined with the use of R410A “green” fluid, allow for optimal efficiency (class A energy label) and exceptional performance with the capability of operating in heating mode at outdoor temperatures down to -15°C.

SILENT RUNNING

By reducing its speed, the Inverter provides much better sound performances compare to fix speed systems where the compressor is running full speed all time.

QUICK REACH OF SET TEMPERATURE

DC Inverter technology allows soft starting whilst ensuring the setpoint temperature is met more quickly. Once the temperature setpoint is reached the Inverter will reduce and adapt speed needed to obtain capacity needed only.

ENERGY SAVING

Compared with traditional fixed speed systems, DC Inverter technology allows significant energy savings to be made, enabling the return on investment to be reduced by up to 15 months. The secret behind is that Inverter can control and adapt its running speed according to the room temperature requirements. By avoiding compressor start-up and stoppage phases, DC Inverter technology enables the system to run continuously while modulating the compressor output in relation to the room’s set temperature point.

PRODUCTS

With a failure rate of less than 0.04%, Airwell is committed to providing reliable products.

Thanks to a wide range of products, Airwell brings you particularly flexible, efficient and competitive answers, adapted to the specific characteristics of your markets.

ENERGY EFFICIENCY

Indication of the annual energy consumption. Established using a standard model, this annual consumption is calculated by multiplying the total output by an average of 500 hours per year in cooling mode, at the nominal load.

COOLING CAPACITY

The cooling capacity is defined as the cooling power in kW of a unit running in cooling mode at the nominal load.

HEATING CAPACITY

The heating capacity is defined as the heating power in kW of a unit running in heating mode at the nominal load.

EER OR ENERGY EFFICIENCY RATIO

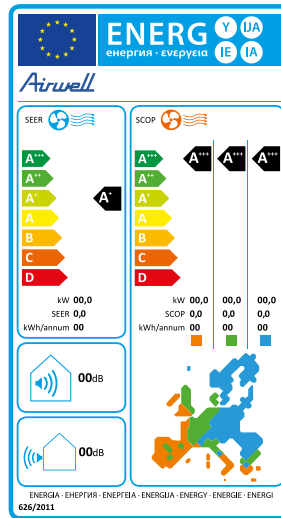

This ratio is the relationship between the cooling capacity and the quantity of electricity required to reach it. In other words, the higher the EER, the more energy efficient the unit.

COP OR COEFFICIENT OF PERFORMANCE

This ratio is the relationship between the heating capacity and the quantity of electricity required to reach it. In other words, the higher the COP, the more energy efficient the unit.

ENERGY LABEL

The energy label is a very well-known initiative for household appliances. Introduced by the European Union, this label is used to classify appliances into several categories based on their energy consumption. Using different types of information (manufacturer, model, heating and cooling capacity, noise level), this label allows users to choose between a number of products.

	SEER (Cooling mode)	SCOP (Heating mode)
A+++	SEER ≥ 8,50	SCOP ≥ 5,10
A++	6,10 ≤ SEER < 8,50	4,60 ≤ SCOP < 5,10
A+	5,60 ≤ SEER < 6,10	4,00 ≤ SCOP < 4,60
A	5,10 ≤ SEER < 5,60	3,40 ≤ SCOP < 4,00
B	4,60 ≤ SEER < 5,10	3,10 ≤ SCOP < 3,40
C	4,10 ≤ SEER < 4,60	2,80 ≤ SCOP < 3,10
D	3,60 ≤ SEER < 4,10	2,50 ≤ SCOP < 2,80
E	3,10 ≤ SEER < 3,60	2,20 ≤ SCOP < 2,50
F	2,60 ≤ SEER < 3,10	1,90 ≤ SCOP < 2,20
G	SEER < 2,60	SCOP < 1,90

FOCUS ON R32 REFRIGERANT

At Airwell, our key concerns are technology, innovation, and protection of the environment. Many years of development have enabled us to produce highly eco-friendly products which help protect our planet.

ADVANTAGES OF R32

- A greener refrigerant than R410A, with one third of the environmental impact.
- More energy efficient (increase of 10%)
- Equipment using R32 needs less gas as efficiency is improved during the heat transmission phase.
- Pure gas, which is easy to recycle.

Wellzone: The ideal temperature in each room

INFO!

Inverter technology allows the unit to regulate its capacity depending on the required cooling load inside the space

- Air/air heat pump: **check up to 6 zones** in heating and cooling mode.
- The air registers modify their position (from 0 to 100%) in accordance with the thermostat of each room, which **maintains the desired comfort temperature**.
- Each zone has an **independent remote control** equipped with the “I Feel” system, used to control the ambient temperature and the on/off switch.
- **Invisible** air conditioning and heating solution for the whole house.
- **Low cost** system (1 single indoor unit).

■ Wide operation range

→ **Specific design:**

- Double EEV
- Two-piece condenser
- Independent electrical box

→ **Reliability/Maintenance:**

- Compressor double protection: two pressure sensors
- Double oil temperature sensor
- Large volume gas-liquid separator (26L) + liquid storage tank (10L)
- Two floor structure (no air bypass during maintenance): efficient measures

→ **Fan:**

- Optimized fan to reduce air vibration
- DC fan to optimize efficiency
- 82 Pa static pressure

■ **Specific oil return**

- Magnetic valve
- If the compressor operate at low frequency, oil return is only with capillary.

AHU connection kit

Airwell offers a range of connection kits to connect VRF outdoor units to third party DX air handling units.

SYSTEM APPLICATION

- Provides a solution for big space to cool down the supplied fresh air with VRF outdoor units to match the air handling units. Integrates all advantages of VRF and AHU units.
- EU legislation requires that every working place has to be supplied with a minimum of 25 m³/h/person of fresh air. So it means that every office, every shop and mostly every commercial building must have this solution in order to comply with the standard.
