1. INTRODUCTION

1.1 General

JGF//VGF series is monosplit fixed speed air conditioner designed for residential buildings. The IDU JGF is a high-wall mounted type indoor with modern appearance. Following models are included:

- ELSI-JGF009-N11 / ELAU-VGF009-H11
- ELSI-JGF012-N11 / ELAU-VGF012-H11
- ELSI-JGF018-N11 / ELAU-VGF018-H11
- ELSI-JGF024-N11 / ELAU-VGF024-H11

1.2 Main Features

The unit benefits from the most advanced technological innovations, namely:

- R410A models
- Microprocessor control and indoor LED display
- Energy efficiency class A in cooling mode for all models
- Max allowing tubing distance of 25m.(For model JGF018-024)
- Up to 10 m vertical high between indoor and outdoor units
- Cooling operation at outdoor temperature up to 46°C.
- Easy installation and service.
- Sleep mode from remote control to save energy
- ON/OFF timer and clock display
- Vertical auto swing with motorized flap (any position stop)
- Intelligent Deicing
- Memory from power failure
- Rapid cooling/heating
- I-Feel function
- Cold air prevention in heating
- Clean function (Blow dry)
- Self diagnostic (Error indications) for ease of maintenance

1.3 Indoor Unit

The indoor unit is wall mounted, and can be easily fitted to many types of residential locations. It includes:

- LED display
- Variable speed with PG motor
- Motorized flap
- High efficiency filtration to ensure a best Air Quality : Advanced filtering combine mechanical, Photo-catalytic + Bi-anti bacterial and observe bad gaseous and smokes.

1.4 Control

The microprocessor indoor controller, and an infrared remote control, supplied as standard, provide complete operating function and programming.

Remote control RC 8:

Compact and economically design, it offers excellent user comfort. Combining modern design with high technology, the RC8 remote control offers powerful functions of real considering of user comfort and energy saving of air-conditioner .

For detail of functions, please refer to Appendix 1

1.5 Outdoor Unit

The outdoor units can be installed as floor or wall mounted units by using a wall supporting bracket. The metal sheets are protected by anti- corrosion paint work allowing long life resistance. All outdoor units are pre-charged. For further information please refer to the Product Data Sheet, Chapter 2.

It includes :

- Compressor mounted in a soundproofed compartment :
- Axial fan.
- Outdoor coil with hydrophilic louver fins for RC units.
- Outlet air fan grill.
- Interconnecting wiring terminal block.

1.6 Tubing Connections

Flare type interconnecting tubing to be produced on site.
For further details please refer to the Installation Manual.

1.7 Inbox Documentation

Each unit is supplied with its own installation, operation and remote control manuals.

When the outdoor unit is installed above the indoor unit an oil trap is required every 5m along the suction line at the lowest point of the riser. In case the indoor unit is installed above the outdoor, no trap is required.

11. CONTROL SYSTEM

11.1 Electronic Control

11.1.1 Abbreviations

AC	-Alternate Current
A/C	- Air-Conditioner
ANY	- ON or OFF status
COMP	- Compressor
CPU	- Central Processing Unit
E2PROM, EEP	- Erase Enable Programmable Read Only Memory
H/W	- Hardware
ICT	- Indoor Coil Temperature sensor
IF, IFAN	- Indoor Fan
IR	- Infra Red
Max	- Maximum
Min	- Minimum
min	- Minute (time)
NA	- Not Applicable
OCT	- Outdoor Coil Temperature sensor
OF, OFAN	- Outdoor Fan OPER - Operate Para. - Paragraph
RAT	- Return Air Temperature (RT1) sensor
RC	- Reverse Cycle (Heat Pump)
R/C	- Remote Control
RCT	- Remote Control Temperature
RH	- Resistance Heater
RV	- Reversing Valve
SB, STBY	- Stand-By
Sec	- Second (time)
Sect	- Section
SH	- Supplementary Heater
SPT	- Set Point Temperature
ST	- Standard (a Model with Cooling Only)
S/W	- Software
TEMP	- Temperature
W/O	- Without

11.1.2 System Operation Concept

11.1.3 Compressor operation

For each Mode including POWER OFF & SB, a Min time delay of 3 min before COMP restarting except during outdoor deicing.

Whenever COMP starts, it will not stop in 6 min even the RAT is changed.

* For the units with memory function, the 1st time of Power ON, there will be no 3 min delay if the previous stage of unit is OFF.

11.1.4 Indoor Fan Control

8 Indoor fan speeds are determined for each model. 4 speeds for COOL modes and 4 speeds for HEAT mode.

Unit Model	Mode	Turbo(Super high)	High	Medium	Low
09	Cooling	1390	1280	1180	1080
	Heating	1350	1250	1140	1040
12	Cooling	1350	1250	1100	950
	Heating	1350	1250	1100	950
18	Cooling	1350	1200	1050	900
	Heating	1350	1200	1050	900
24	Cooling	1350	1200	1050	900
	Heating	1420	1250	1150	900

In high/ medium/ low indoor fan user setting, unit will operate fan in selected speed.

In AutoFan user setting, fan speed will be adjusted automatically according to the difference between actual room temperature(RAT) and user set point temperature(SPT).

Indoor Fan speed		High	Medium	Low
RAT-SPT	Cooling	≥ 2	(0,2)	≤ 0
	Heating	≤ 1	(1,3)	≥ 3

During Auto Fan operating, one speed should keep at least 210sec operating before switching to other speeds.

In DRY mode, the automatic fan speed is forced to be low.

11.1.4.1 Turbo Speed

In COOL and HEAT mode (not available in AUTO, DRY, FAN mode), press the Turbo button, the super high fan speed is selected on Remote control and the indoor fan rotates at super high speed.

11.1.5 Outdoor Fan Control

11.1.5.1 OFAN Speed Type

The OFAN motor is a one speed AC motor and controlled by the relay on outdoor controller.

11.1.5.2 General rules

1. The OFAN is ON when COMP ON during Cool, Dry and Heat Mode.
2. When the unit is off by remote control, in safety stops and stop after reaching to the temperature point, the outdoor fan stops.
3. Outdoor fan OFF will compressor when COMP is OFF during cooling and heating mode.

11.1.6 Refrigerant control

Capillary is used in each mode.

11.1.7 Reversing Valve (RV) Control

Reversing valve is on in heat mode.

Switching of RV state is done only after COMP is off for over 2 minutes.

11.2 Fan Mode

In this mode, the IFAN may run at high, medium, low and automatic speed. The COMP, OFAN and RV will be OFF.

In this mode, the range of setting temperature is 16~30C

11.3 Cool Mode

If $RAT \geq SPT + 1$, the unit starts cooling operation. In this case, the COMP and OFAN will operate and the IFAN will run at the setting speed.

If $RAT \leq SPT - 1$, the COMP and OFAN will stop operating, while the IFAN will run at the setting speed.

If $SPT - 1 < RAT \leq SPT + 1$, the unit will maintain the previous status.

In AutoFan user setting, fan speed will be adjusted automatically according to the SPT and RAT, refer to 11.1.4

11.4 Heat Mode

If $RAT \leq SPT + 2$, the unit will operate in heating mode. The COMP, OFAN and RV will operate and the IFAN will delay 3min to start at the latest

If $SPT + 2 \leq RAT \leq SPT + 4$, the unit will maintain the previous status.

If $RAT \geq SPT + 4$, the COMP and OFAN will stop and the IFAN will blow for 60s at setting speed.

During this period, the fan speed cannot be switched.

11.4.1 Indoor Fan Control in Heat Mode

IFAN speed depends on the indoor coil temperature

Anti-cold air function

When starting the heating mode, anti-cold air function will be activated and IFAN can run at low speed or stop running. This function will terminate after the unit runs for 2min or the ICT reaches 40 degree.

Residual heat blowing function

During heating, when the stopping condition for the COMP is reached, the COMP and OFAN stop running while the louver moves to position L. The IFAN will stop after running for 60s at setting speed.

11.5 Auto Cool/Heat Mode

In AUTO mode, the system selects the running mode (COOL/HEAT/FAN) automatically according to the room temperature. The display shows the actual running mode and setting temperature.

There will be 30s delay for mode conversion.

1. When $RAT \geq 25$ degree, the cooling mode is selected.
2. When $RAT \leq 20$ degree, the unit runs in heating mode
3. When $20 \text{ degree} < RAT < 25 \text{ degree}$, upon initial startup, the unit will enter auto mode and run in automatic fan mode. If the other mode changes into auto mode, the previous running mode will remain.

11.6 Dry Mode

If $RAT \geq SPT + 2$, the unit starts cooling operation. In this case, the COMP and OFAN will operate and the IFAN will run at the low speed.

If $RAT \leq SPT - 2$, the COMP and OFAN will stop. While IFAN will run at low speed.

If $SPT - 2 < RAT \leq SPT + 2$, While IFAN will run at low speed. COMP and OFAN will operation in 6 min ON and 4 min OFF in cycling.

In this mode, the RV will be OFF and the temperature setting range is 16~30.

11.7 Louver Control

After power on, the up and down swing louver will automatically open and then close completely.

In heating mode, if the swing function is not set, the up and down louver will rotate to maximum in clockwise direction. Then it will rotate to position D. Under other states, the upper and lower air deflector will rotate to level L.

If the swing function is set when starting the unit, the louver will swing between Position L and D. there are 7 states for louver: in position L, A, B, C, D, and swing between L and D, stop in any place between Position L and position D. When the unit is turned

off, the air deflector will stay in position 0.

The swing is available only when the swing function is set and the indoor fan is running. The louver swing can also be set between L and B, between A and C, between B and D.

11.8 Protections

11.8.1 Indoor Coil Defrost Protection

During Cool Mode/Dry Mode, this protection prevents freezing of the indoor heat exchanger. When $ICT \leq 0$ C for continuous 3 mins, COMP and OFAN will stop and IFAN will run at its setting speeds.

The system will resume its previous status if the protection is cleared and COMP OFF time is 3 min. (COMP OFF time will be 4 min during the 6 min ON and 4 min OFF cycling during Dry Mode)

11.8.2 Indoor Coil over Heating Protection

During Heat Mode, this protection prevents abnormal high pressure.

When ICT reaches 58C, OFAN will stop operating and resume operating if the ICT go to normal.

11.8.3 Over Current Protection

Detect an input current by the CT during the COMP is running.

If the current is high than 22A for continuous 3 sec, COMP and OFAN will stop, IFAN will run at setting speed.

The system will resume its previous status if the protection is cleared and COMP stops for 3 min.

If the unit stops as such protection for 6 times,(the counter will be cleared after the compressor has run for 6min), it cannot resume running automatically and display malfunction, it can resume by pressing ON/OFF.

11.8.4 Outdoor Coil Deicing Protection

This protection is for Heat Pump Only

This protection is carried out by the cooling cycle (reverse cycle). The defrosting time or outdoor heat exchanger temperature must be more than its setting values when finishing the deicing protection.

In the deicing protection, IFAN is forced OFF.

11.8.4.1 Deicing Starting Conditions

The starting conditions must be made with the room air temperature (RAT) and indoor coil temperature (ICT) and the trend of changing. Under the conditions that the system is in heating operation, after the time for defrosting is judged to be satisfied, the deicing operation will start.

The minimum operating time of heating mode before deicing:

- a) 40 min after 1st time of power on
- b) 5 min after system is STBY by RC or temperature condition.

11.8.4.2 Deicing Protection Procedure

1. Start to defrost: COMP stops and starts up 55S later
2. Start to defrost: Outdoor fan will stop after COMP stops for 50S.
3. Defrosting finish: COMP stops and starts up 55S later.
4. Defrosting finish: Outdoor fan will start up when the COMP is stopping.

11.8.4.3 Exiting Deicing

The deicing operation depends:

1. RAT & ICT and the trend of changing
2. The continuous running time of deicing reaches to 12min.

11.9 Indoor Unit Controllers and Indicators

The following shows the indicators of the indoor unit (Layout of display in JGF/HHF has some difference.)

STBY/RUN INDICATOR 	Lights up in RED in when the Air Conditioner is connected to power and the mode is STBY. Lights up in GREEN when the when the unit is turned on.
COOL INDICATOR  FAN INDICATOR  DRY INDICATOR  HEAT INDICATOR 	Lights up during specified operation mode (COOL/DRY/HEAT).
2* 7 segments display 	<ol style="list-style-type: none"> 1. In normal situation, the setting temperature is displayed. 2. Shows room temperature when receiving the corresponding demand from controller. When received effective RC command, setting temperature will be shown for 5 sec, and then go back to room temperature display. 3. Shows the fault code when there is a fault(Refer to 12.1.3)

12. TROUBLESHOOTING

12.1 ELECTRICAL & CONTROL TROUBLESHOOTING

12.1.1 Precautions before Performing Inspection or Repair

Be cautious during installation and maintenance. Do operation following the regulations to avoid electric shock and casualty or even death due to drop from high attitude.

* **Static maintenance** is the maintenance during de-energization of the air conditioner. For static maintenance, make sure that the unit is de-energized and the plug is disconnected.

***Dynamic maintenance** is the maintenance during energization of the unit. Before dynamic maintenance, check the electricity and ensure that there is ground wire on the site. Check if there is electricity on the housing and connection copper pipe of the air conditioner with voltage tester. After ensure insulation place and the safety, the maintenance can be performed.

Take sufficient care to avoid directly touching any of the circuit parts without first turning off the power. At time such as when the circuit board is to be replaced, place the circuit board assembly in a vertical position. Normally, diagnose troubles according to the trouble diagnosis procedure as described below.(Refer to the checkpoints in servicing written on the wiring diagrams attached to the indoor/outdoor units.)

12.1.2 Confirmation

12.1.2.1 Confirmation of Power Supply Confirm that the power breaker operates(ON) normally;

12.1.2.2 Confirmation of Power Voltage Confirm that power voltage is AC220~240V +/- 10%. If power voltage is not in this range, the unit may not operate normally.

12.1.3 Judgment by Indoor/Outdoor Unit Diagnostics

If the malfunction still exists 4min later after stop of unit due to compressor protection, error code will be directly displayed though indoor display. In other situations, error code can be displayed by pressing LIGHT button 6 times within 4s.

Fault description	2* 7 segments	LEDs blinking (0.5s ON and 0.5s OFF)			Possible Reason
		RUN	COOL	HEAT	
No feedback of indoor motor	H6	11			1. IFAN motor damaged 2. IFAN motor blocked 3. IDU PCB problem
Malfunction protection of jumper cap	C5	15			Poor connection of the jumper on indoor PCB.
Zero-crossing protection (IDU)	U8	17			1. IFAN motor damaged 2. Zero-crossing circuit damaged on IDU PCB
RAT failure	F1		1		1. Sensor connection is not good 2. Sensor was broken or damaged (Refer to Sect 14 to check the sensor value)
ICT failure	F2		2		3. PCB temperature detection circuit has problem

12.2 Simple procedures for checking the Main Parts

12.2.1 Checking Mains Voltage.

Confirm that the Mains voltage is between 198 and 264 VAC. If Mains voltage is out of this range, abnormal operation of the system is expected. If in range check the Power (Circuit) Breaker and look for broken or loosed cable lugs or wiring mistake(s).

12.2.2 Checking Power Input.

If Indoor unit power LED is unlighted, power down the system and check the fuse of the Indoor unit. If the fuse is OK replace the Indoor unit controller. If the fuse has blown, replace the fuse and power up again.

12.2.3 Checking the Outdoor Fan Motor.

Run the unit in Cool/Heat/Dry mode (where the OFAN speed is high)

Check the voltage between two terminals(N and 5), normal voltage is 220-240VAC.

12.2.4 Checking the Compressor.

The compressor is rotary compressor with single-phase power input. It includes two windings of main and auxiliary. Check the resistance of terminal R and C and resistance of terminal S and C. If the windings is open or short, compressor should be replaced.

Pay attention, for the wiring connections, please refer to the wiring diagram and have double confirmation before checking the compressor.

12.2.5 Checking the Reverse Valve (RV).

Running in heating mode, check the voltage between two terminals(N and 4), normal voltage is 220-240VAC.
