Airwell

Just feel well

X 1200 - X 1900

Packaged air conditioners
Vertical units

- Air cooled models (AC)
- Water cooled models (WC)
- Refrigerant R407C
- Capacities from 12.3 to 18.0 kW

Version: February, 2016

Airwell

Just feel well

Introduction

Within the context of the HCFC fluid replacement, these units have been optimized to operate with the R407c refrigerant which contains no chlorine and has no effect on the ozone layer.

PRESENTATION

The **X 1200** and **X 1900** packaged air conditioners are presented:

- Single packaged for the **WATER** cooled models (**WC**).
- With a separate outdoor condensing unit for the **AIR** cooled models (**AC**).

The air intake and discharge is provided:

- Either directly by air intake grilles and a discharge plenum (accessory),
- Or by ducts for intake and/or discharge, to be connected to the connection flanges (accessory).

This well-finished, single packaged unit combines many features such as east installation, high efficiency, quiet operation and reliability, which make it well suited for air conditioning and air filtering in offices, stores and industrial premises.

These packaged air conditioners can be equipped with:

- Electric heater (integrated or duct-mounted), (option)
- Hot water coil, (option)
- Fresh air intake (lateral or rear), (accessory)
- Remote control, (accessory)
- Air discharge plenum with double deflection (accessory).

They benefit from 30 years experience and are perfectly suited to working with:

- Wasted water; its consumption being reduced to a minimum by a pressostatic valve (**XWC** on wasted water).
- Recycled water; supplied by a cooling tower or an outdoor heat exchanger (**XWC** on recycled water).
- Outside air; with the possibility of operating at very low temperatures (down to –10 °C with the “ALL SEASONS” option on the **AC** models).

MAIN FEATURES

- Cabinet with reduced floor dimensions,
- Standard ventilation: Three fan speeds (high/normal/low) which can be pre-selected on the terminal block to adapt to the ductwork air pressure drops.
- Optional “High Speed Ventilation” equipment with a single speed motor.
- Vertical discharge with or without duct, or horizontal discharge with plenum (accessory).
- Two air intake possibilities: On the front with grilles or on the rear with ducts, with the rear air intake (accessory).
- M1 filters, mounted on a metal frame with stiffening netting.
- Integrated unit control (Control Panel) or remote control (accessory).
- Electrical, water and refrigerant connections on the right or left side.
- Cooling with wasted water with a pressostatic valve.
- Two heating possibilities: Integrated electric coil or hot water heating coil.
- Three control possibilities: Inverting type (standard), automatic thermostat for “heating/cooling” with neutral zone (accessory supplied with integrated electric heating) and air monitoring control (remote control accessory).
- Two possibilities of refrigerant pipes (**AC** models): up to 25 m maximum with factory precharged pipes (accessory) or with pipes brazed and charged on site (set of female valves supplied as an accessory for pipes up to 45 m).

DESCRIPTION

Bodywork:

- Panels and side faces made of profiled sheet steel covered with enamel finish, baked in a high temperature oven.
- Intake grilles made of modular elements in flameproof, shock resistant polystyrene, classified UL-VO according to UL94.

Insulation and protection:

- Thermal and acoustic insulation of the unit.
- Watertight unit base for the possible collection of condensates or abnormal overflowing (e.g. condensate drain tray clogging).

Refrigerant circuit:

- **All models**

- Hermetic type compressor fitted with thermal and electrical protections, linked to a factory sealed and brazed refrigerant circuit.
- Pressure switches and high and low pressure tapping points.
- Liquid line protected by a strainer (**WC** model) or by a filter (**AC** model).
- Evaporator composed of copper tubes with aluminium fins and anti-corrosion protected condensate tray.

- **WC model**

- Coaxial condenser with counter flow circulation, equipped with finned copped tube in a steel cover.
- Pressostatic valve on the water inlet for reducing water consumption to a minimum (wasted water model).
- On request, the unit is supplied without a pressostatic valve but with an additional manometer pressure tapping point for independent control of the water flow (recycled water model).

- **AC model**

- Reserve liquid receiver.
- Thermostatic expansion valve with pressure balancing.
- Liquid indicator and valve on liquid line.
- Shut off valves on indoor unit and outdoor condensing unit (CONA) for refrigerant pipes.
- Outdoor condensing unit with coils composed of copper tubes and aluminium fins.

Ventilation/Filters:

- → Fan equipped with two, direct drive, centrifugal wheels with double inlets.
- → Standard 3 speed fan motor (VS) switchable from the electrical terminal box (refer to electrical connections).
- → Specific “High Speed Ventilation” (FV) motor available as optional.
- → Fan-motor assembly mounted on a sliding chassis with anti-vibration seals for easy maintenance.
- → M1 flame retardant re-usable filters, made of synthetic fibres, with a metal frame and protective grille.
- → CONA with single phase 230 V fan motors.
- → Propeller fan of CONA with direct drive and low speed of rotation.

Electricity/ Safety:

Manufactured in large series, these air conditioners undergo numerous controls during fabrication and are systematically tested before delivery.

Safety devices effectively protect this equipment:

- → Protection of the compressor with fuses, thermal relay and electronic anti- short cycle timer.
- → Protection of the integrated electric heater (accessory) with fuses and dual automatic and manual reset overload protection devices.
- → Fuses on the control circuit.
- → Protection of the fan motors (VS and FV) by fuses and an internal safety device.
- → Low pressure pressostats with automatic reset and high pressure pressostats with manual reset.
- → Solenoid shut off valve on the liquid line (**AC** model).
- → Crankcase heater as standard on all models.
- → Protection of the CONA fan motor with internal thermostat.
- → Mains power supply 400V/3N~/50 Hz as standard. An option 400V/3~/50 Hz and 230V/3N~/50 Hz.
- → Terminal block for single phase 230V power supply to the control circuit with a 400V/230V transformer (not supplied) if the neutral wire is not available.

Control/Regulation:

- → Fascia grouping the controls (Main “ON/OFF” switch with control light – Heating “ON/OFF” and Cooling “ON/OFF”) and the regulation (inverting thermostat).
- → Automatic cooling/heating with neutral zone thermostat supplied with the integrated electric heater accessory.
- → Remote control with integrated inverting thermostat with the additional possibility of ventilation control (**VA** or **VB** connection).
- → **VA** connection: Continuous ventilation during cooling and heating.
- → **VB** connection: Ventilation regulated during heating and continuous ventilation during cooling.
- → “ALL SEASONS” system (option) controlling the condensing pressure; allowing cooling on the AC models down to –10 °C outdoor temperature.

AFTER SALES SERVICE/MAINTENANCE

CAUTION:

Procedures for working on the refrigerant circuit, and the technical characteristics, are different from the R22. Consult the corresponding instructions and follow the recommendations when carrying out any work.

Access to the air filters is from the front after removal of the air intake grille.

All the refrigeration, electrical and ventilation devices are easily accessible from the front of the unit after removal of the front panels.

Every accessory is supplied with fitting instructions (and adjustment instructions, if necessary).

The technical data, installation instructions, maintenance and operation instructions, exploded views and spare parts lists are available on request.

Pt = K1xK2xPt1									
K1 COEFFICIENT AIR FLOW									
Qa/Qn					**K1**				
0.80					0.87				
0.90					0.95				
1					1				
1.1					1.06				
1.2					1.13				
K2 COEFFICIENT ΔTW									
ΔTw°K	4	6	8	10	12	14	16	18	20
K2	1.05	1.03	1.01	1	0.98	0.96	0.95	0.94	0.92
WATER FLOW									
$Qw\ (m^3/h) = \frac{0{,}86 \times Pt\ (kW)}{\Delta Tw}$									
ANTI-FREEZE PROTECTION									
Nota: Anti-freeze mandatory in summer and winter									

Pt1: Total heating capacity with nominal air flow.
Pt: Total heating capacity.
Tsi: Dry indoor temperature.
Qa: Treated air flow.
Qn: Nominal air flow.
Qw: Water flow.
Tws: Hot water outlet temperature.
Twe: Hot water inlet temperature.
ΔTw: Difference in temperature water inlet/outlet.
Twm: Hot water average temperature.
ΔPw: Hot water pressure drops.

		X 1200	X 1900
Water content	l	2	3
Nominal water flow	m³/h	1.3	2.6
Maxi. water pressure	kPa	1000	1000
Maxi. water inlet temperature (Twe)	°C	90	90
Mini. dry indoor temperature (Tsi)	°C	+6	+6
Ø connection	mm	M 26x34	M 26x34

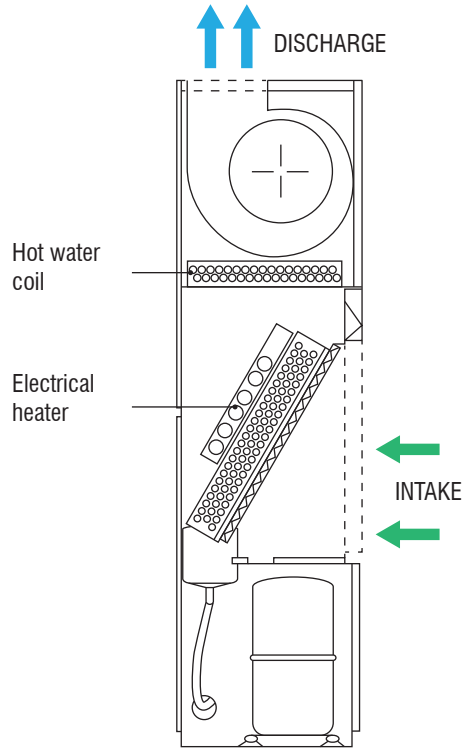
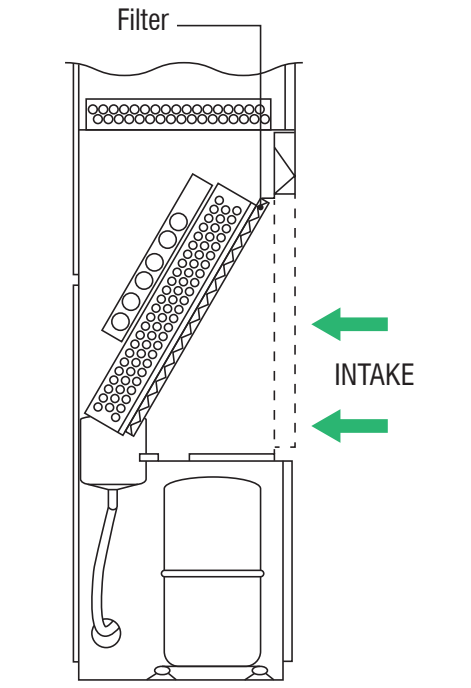
ELECTRICAL HEATER/HOT WATER COIL **OPTIONS**



Models		X 1200	X 1900
HOT WATER COIL			
Nominal power input	kW	15.5	29.7
Nominal water flow	m³/h	1.3	2.6
Water pressure drop	kPa	10	22
Ø connections	mm	M 26x34	
ELECTRICAL HEATER			
Total power input	kW	9	12
Number of stages		1	1
Number of stages		3	3
Power input/element	kW	3	4

Notes:
The electrical heater and the hot water coil can not be fitted together. Provide for a separate regulation for the hot water coil.
The integrated electric heater is supplied with an automatic cooling/heating thermostat with neutral zone and is equipped with 2 temperature limit controls (manual/automatic).

Filter



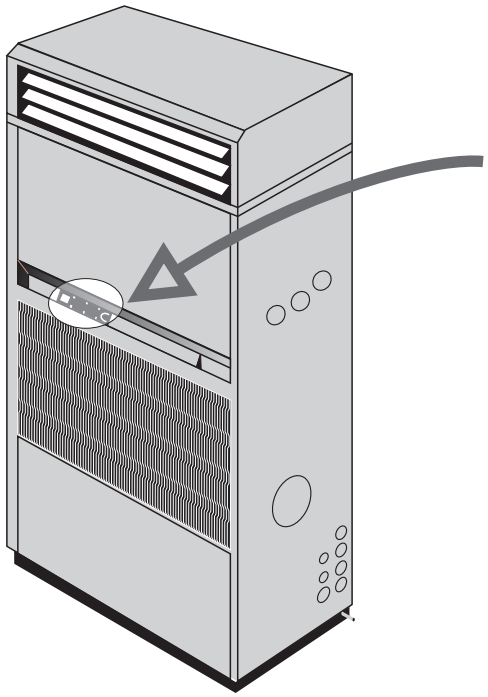
Models		X 1200	X 1900
Filter type		Flat with metal frame, mounted on sliding rails	
Media type		Flame retardant synthetic fibres	
Number of filters		1 - Re-usable	
Dimensions WxDxH	mm	740x12x525	790x12x615
Efficiency (1)	%	83.8	
Eurovent/CSTB classification (2)		EU3/M1	
Access		Air intake grilles (front)	

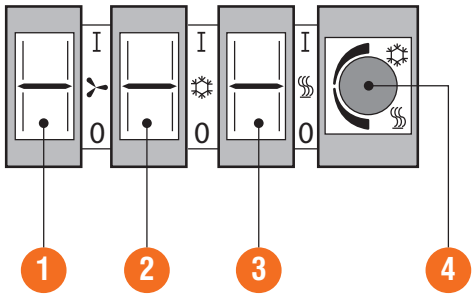
(1) Test report 603 325/3 dated 05.05.76 issued by the L.N.E. (PARIS)
(2) Test report 82.18176 dated 12.05.82

Notes:
The filters also provide clean air from the fresh air intake (fresh air intake accessory) and the rear air intake.

CONTROLS AND REGULATION

Control panel





1	Ventilation On/Off switch
	0 Off
	1 On (with control light)
2	“Cooling” selection switch
	0 Off
	1 On “Cooling”
3	“Heating” selection switch
	0 Off
	1 On “Heating”
4	Ambient thermostat type:
	Inverting thermostat (included)
	With neutral zone (accessory)

NOTE:
With the automatic “Cooling/Heating” thermostat with neutral zone supplied with the integrated electric heater, automatic operation is obtained by placing the two selection switches 2 and 3 on position 1.

REMOTE CONTROL (accessory)

→ Ventilation operation

There are two possibilities:

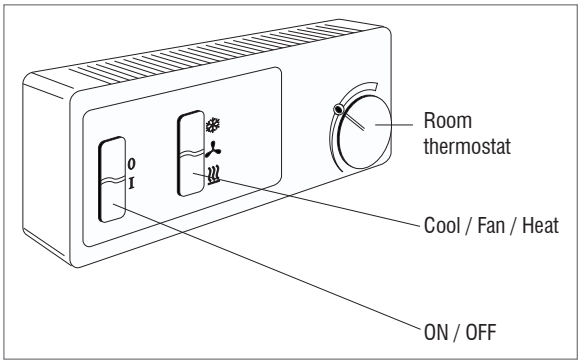
- **CONTINUOUS FAN OPERATION FOR HEATING AND COOLING (VA)**
  Fan operation is continuous in both HEATING and COOLING modes. Terminal A of the REMOTE CONTROL unit must be connected to the terminal 7 on the air conditioner (VA wiring
- **ON/OFF FAN OPERATION IN HEATING MODE AND CONTINUOUS OPERATION IN COOLING MODE (VB)**
  Fan operation is regulated in HEATING mode but continuous in COOLING mode. Terminal B of the remote control unit must be connected to terminal 7 on the air conditioner (VB wiring).

→ Operation without electric heating

Terminal 8 of the remote control unit must be connected.
Shunt (SHC*) must be placed across terminals 13 and 14 of the air conditioner.

→ Operation with electric heating

Terminal 8 of the remote control unit must be connected to terminal 12 of the air conditioner.
Shunt (SHC*) must be removed and replaced by heating safety devices (FC5* and FC8*) wired in series across terminals 13 and 14 of the air conditioner.



HEATING CONTROL

→ In-built electrical heater

This accessory is supplied with an automatic “Cooling/Heating” thermostat with neutral zone which replaces the ambient thermostat 4 supplied with the unit.
In the case of a remote control (accessory) the inverting thermostat pilots the cooling or the heating according to the position of the “Cooling/Heating” reversing switch (item 3).

→ Hot water heating

This accessory must be equipped with an anti-freeze safety device and a regulation system (not supplied) compatible with the installation.

* Reference on electrical diagram.

DIMENSIONS (in mm) - INSTALLATION

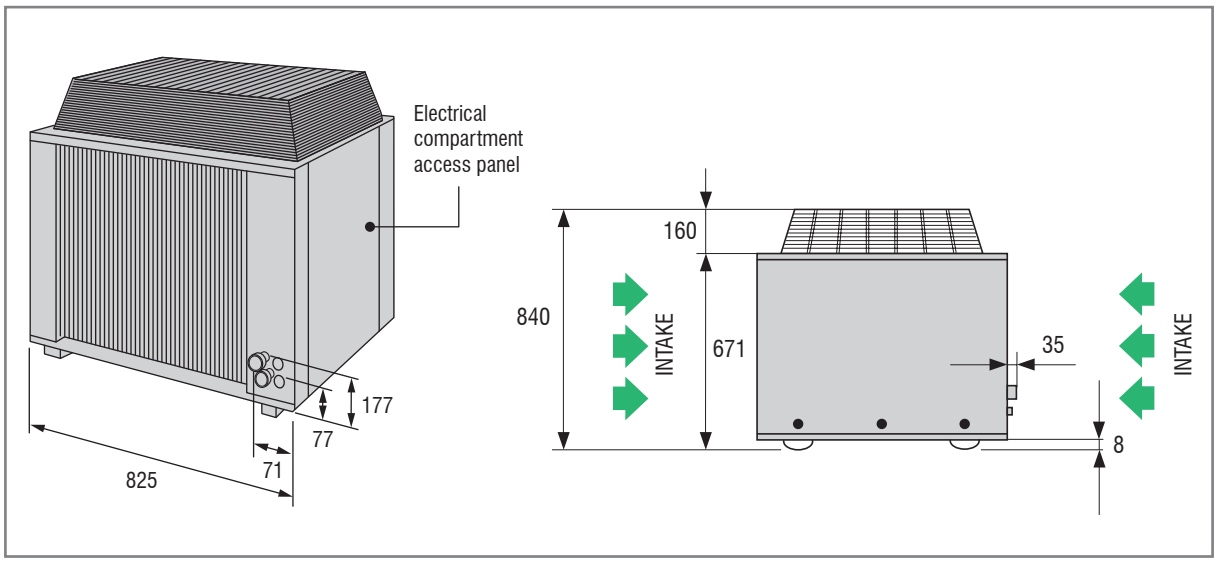
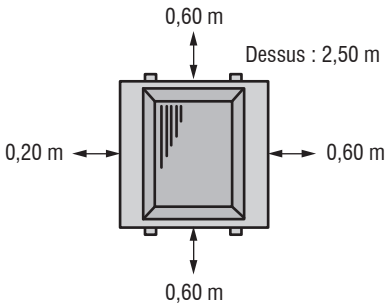
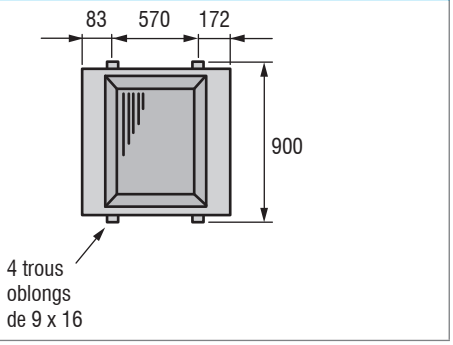
Outdoor condensing unit - Type CONA 54 - AC models



CLEARANCES



FLOOR MOUNTING AND FIXING



Models		CONA 54
Air flow	m³/h	5000
Rotational speed ventilation	tr/min	630
Sound pressure at 10 m (1)	dBA	45
Power input	W	611
Motor coupling 230 V		•
Power supply		~ 230 V - 50 Hz

(1) Sound pressure in free field on reflecting surface

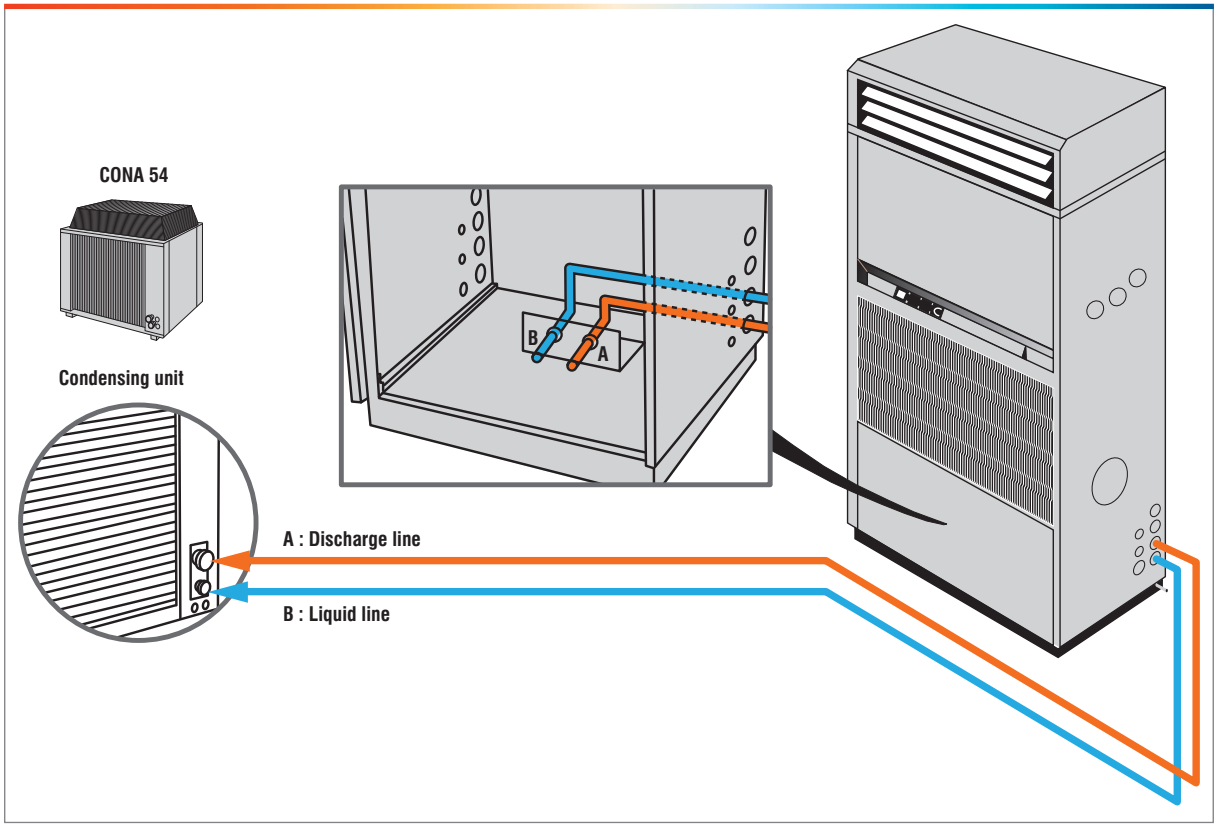
"ALL SEASONS" SYSTEM - **AC MODELS**

The "ALL SEASONS" system permits running the air cooled units in "Cooling" position with low outdoor temperatures down to –10 °C for air conditioning of rooms with high internal heat load.

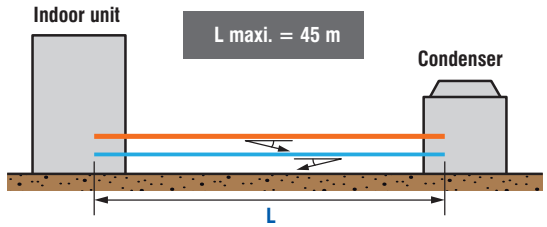
→ **XAC 1900 + CONA 54**
Accessory located in CONA condensing unit including: **1 voltage inverter.**

***** References on wiring diagram.

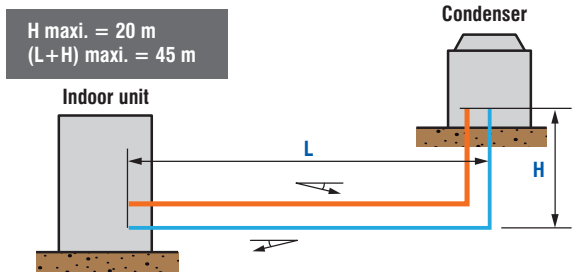
REFRIGERANT CONNECTIONS - **AC MODELS**



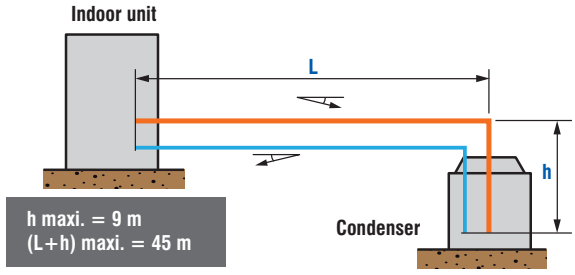
CONDENSER AT THE SAME LEVEL AS THE INDOOR UNIT

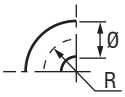


CONDENSER HIGHER THAN THE INDOOR UNIT



CONDENSER LOWER THAN THE INDOOR UNIT





Bending of refrigeration pipes: R ≥ Ø 3.5

Minimum slope downwards: 1 cm/m

Discharge line

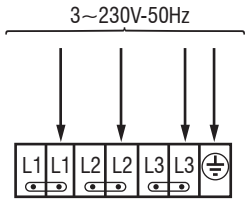
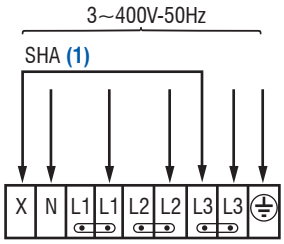
ELECTRICAL CONNECTIONS - MAIN POWER SUPPLY

POWER SUPPLY 3~ 230 V + EARTH (regulated in France)

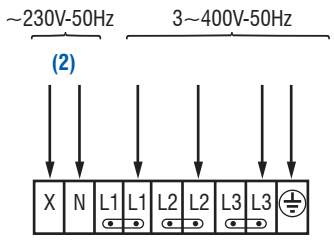


POWER SUPPLY 3 N~ 400 V + EARTH (with neutral)



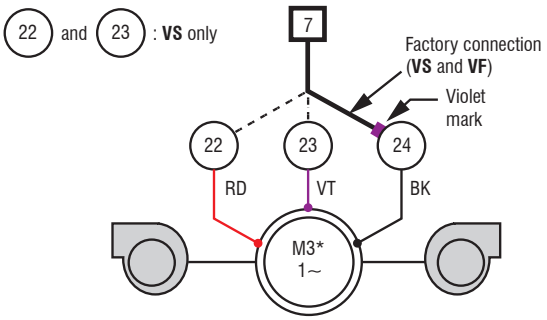
SHA = SHUNT supplied factory mounted

POWER SUPPLY 3~ 400 V + EARTH (without neutral)



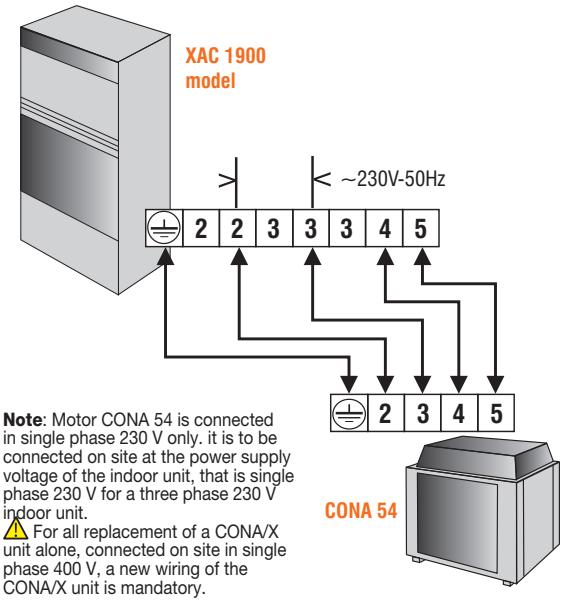
The SHUNT SHA (1) must be suppressed

CHOICE OF THE INDOOR UNIT FAN SPEED



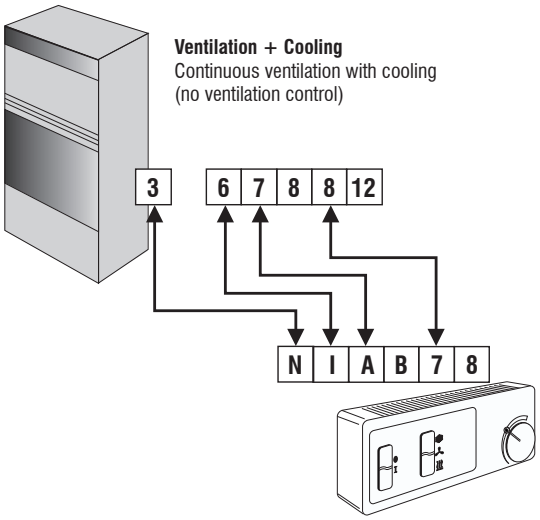
Fan speed	VR (reduced)	VN (normal)	GV (high)	FV (high)
Motor wire	Red (RD)	Violet (VT)	Black (BK)	Black (BK)
Connection	22-7	23-7	24-7	24-7

INTERCONNECTIONS WITH OUTDOOR CONDENSING UNIT (CONA)

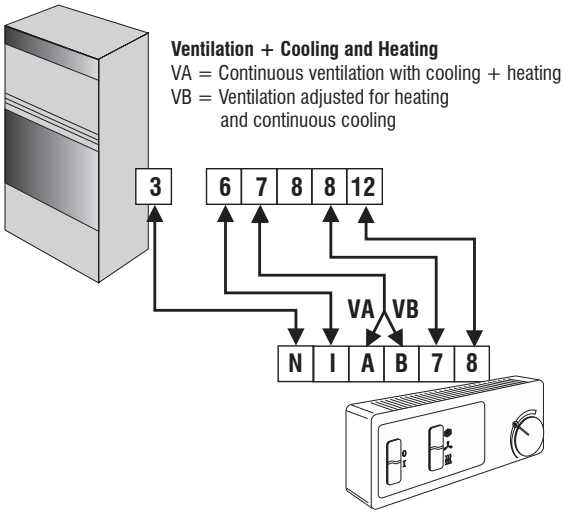


Note: Motor CONA 54 is connected in single phase 230 V only. it is to be connected on site at the power supply voltage of the indoor unit, that is single phase 230 V for a three phase 230 V indoor unit.
⚠ For all replacement of a CONA/X unit alone, connected on site in single phase 400 V, a new wiring of the CONA/X unit is mandatory.

INTERCONNECTIONS WITH REMOTE CONTROL



Ventilation + Cooling
Continuous ventilation with cooling (no ventilation control)



Ventilation + Cooling and Heating
VA = Continuous ventilation with cooling + heating
VB = Ventilation adjusted for heating and continuous cooling

ELECTRICAL SPECIFICATIONS - MAIN POWER SUPPLY

		1200		1900
